

FEDERATION AERONAUTIQUE INTERNATIONALE

AEROMODELLING COMMISSION (CIAM) - PROPOSAL FORM

Date: 10-07-2008
Proposal submitted by: Netherlands
Sporting Code Volume: F 3C Category Section 4C
Heading of section: GENERAL CHARACTERISTICS
Class: F3C

Number & heading of the paragraph 5.4.3. GENERAL CHARACTERISTICS

Page number if appropriate: 7

Type the instruction in the space below:

Change the text as shown below.

Type the text changes in the space below (show deletions by strikethrough and additions as **bold underlined**):

5.4.3. GENERAL CHARACTERISTICS

Electric motors are limited to a maximum no load voltage of 42- 51 volts for the propulsion circuit.

Type out the reasons in the space below:

Changing the voltage to 51 volts makes an electric helicopter more competitive to piston engines and will increase maximum flight time.

Type out supporting data for proposed technical amendments in the space below:
